

CASE STUDY

Site iQ helps Pasture Pet Foods avoid network upgrade costs

Challenge

Pasture Pet Foods, in Hawke's Bay, was planning to install a new electric boiler as part of its decarbonisation efforts. However, the challenge was staying within the site's capacity limit, as exceeding it would have required a costly network upgrade.

Solution

We installed Site iQ – a real-time site metering and analytics solution to provide clear visibility into Pasture Pet Food's available electrical headroom. Monitoring revealed that the plant had adequate capacity to operate the new electric boiler at full capacity, eliminating the need for additional infrastructure.

Impact

The insights from Site iQ enabled Pasture Pet Foods to avoid network upgrade costs while staying on track with its expansion and decarbonisation goals. The real-time data and strategic analytics from the Site iQ dashboard continue to inform smarter energy decisions and improved understanding of its site infrastructure.
